

European Concept

Tampere meeting, May 25-26, 2011
Program draft May 10th

Motive to participate:

European Concept is a community of companies, people and research organizations interested in taking proactive actions, aiming at identifying and dealing with new needs for products and services continuous innovation in today globalized markets. Today, the community is actively participated by more than 100 companies and research centers which represent the leaders in the field. By participating to the 3rd Annual Meeting, your organization will benefit for exchanging information, needs and trends with leading companies. Furthermore, medium-term strategic alliances can be formed. If your company is present, it can be taken into account in alliance forming.

Target of the meeting:

Serious commitment of the industry to carry out joint research & development implementations (80% of the focus)
Industry's message regarding how to formulate FP8 (20% of the focus)

Result to be taken home:

A clear list of companies with whom and topics on which to carry out joint projects and implementations, either with the help of applying for public funding or without public funding.

Can you pass the following:

In August 2010, NewsWeek promoted Finland to be number 1 on the list of "Best countries in the World" as follows: (By Tara A. Lewis / News Week)

With such a huge range of nations in the world, the question of whether there is a best place to live seems both simple and elusive. With that idea in mind, NEWSWEEK offers this list of best countries. Given that there are so many ways to measure achievement, we chose the five we felt were most important-health, economic dynamism (the openness of a country's economy and the breadth of its corporate sector), education, political environment, and quality of life. And because it's easier to improve quality of life if you're tiny and rich like, for example, Finland, the list also accounts for income and size with rankings by sub-categories.

Despite the long winter, Finland is a pretty great place to be - the best, actually. It ranked the highest overall and also comes in as the best small country, the best high-income country, and the best country for education. Its students scored first in science and second in both reading and math in the 2006 (the most recent one for which data are available) Program for International Student Assessment, a test of 15-year-olds' education skills by the OECD.

Have an experience: How nature can support innovativeness?
